

Custom Ministry Libraries

While Digital Bible Society provides an extraordinary foundation of biblical resources in more than 1,700 languages, the VillageServer is not limited to those materials alone.

Each church, ministry, missionary organization, Bible school, training center, or outreach program can create its own customized library by adding additional content to the VillageServer.

This allows every organization to tailor the system to its own ministry objectives, language requirements, teaching priorities, and outreach strategies.

Additional content may include:

- Ministry manuals
- Leadership training materials
- Pastor training courses
- Church planting resources
- Sermon collections
- Teaching series
- Bible studies
- Worship resources
- Testimonies
- Evangelism materials
- Conference recordings
- Training videos
- Children's ministry resources
- Local-language teaching materials
- Church documents
- Community outreach resources

Content can be loaded onto memory cards, storage devices, or other approved media and then added directly to the VillageServer system.

This allows ministries to create their own unique resource libraries while still benefiting from the extensive biblical foundation provided through Digital Bible Society and other approved content partners.

A church in one region may emphasize pastor training and leadership development.

A children's ministry may focus on Bible stories, children's videos, and family discipleship materials.

A missionary training center may emphasize church planting, evangelism, and leadership resources.

The VillageServer allows each ministry to build a library that reflects its specific calling and purpose.

Your Ministry. Your Library.

The VillageServer should be viewed as a platform rather than a fixed collection of materials.

The foundation may begin with Scripture, audio Bibles, and gospel films, but each organization can continue expanding the library according to its own vision and ministry needs.

As new materials become available, they can be added to the system and distributed throughout churches, villages, schools, ministry centers, and outreach locations.

This flexibility allows every VillageServer to become a customized ministry resource center

designed specifically for the people it serves.
