

Ministry Resource Partners

Organizations and Resources

The VillageServer initiative is designed to connect ministries, churches, missionaries, and Christian workers with proven resources that can help expand access to God's Word and strengthen ministry efforts around the world.

The organizations listed below represent some of the resources currently used within our ministry network. As new opportunities become available, additional organizations and resources will be evaluated and added.

Our goal is to identify practical, effective, and field-tested resources that can assist ministries in accomplishing their mission.

TechSoup

TechSoup provides discounted technology products, software, hardware, and technical resources to qualifying nonprofit organizations.

These resources can help ministries obtain equipment and technology solutions at significantly reduced costs.

Examples may include:

- Computers
- Software
- Networking equipment
- Cloud services
- Productivity tools
- Technical training resources

TechSoup can be a valuable resource for churches, ministries, mission organizations, and nonprofit groups seeking affordable technology solutions.

Bible Runners

Bible Runners is a ministry focused on distributing God's Word to people and communities that may have limited access to Scripture.

Their work helps place Bibles into the hands of individuals who might otherwise have difficulty obtaining them.

Bible distribution remains one of the most important components of ministry outreach and discipleship.

Digital Bible Society

Digital Bible Society serves as one of the primary content sources for VillageServer deployments.

Digital Bible Society provides access to biblical resources in more than 1,700 languages and offers a wide variety of digital ministry materials.

Available resources may include:

- Bible translations
- Audio Bibles
- Scripture recordings
- Gospel films

- Christian movies
- Language-specific resources
- Evangelistic materials
- Discipleship resources

These resources form a powerful foundation for building multilingual VillageServer content libraries.

Digital Bible Society resources can be integrated into VillageServer deployments and distributed through local ministry networks where permitted.

Growing Resource Network

The organizations listed here represent only a portion of the resources currently being evaluated and utilized.

New ministry partners, technology providers, Bible distribution organizations, training resources, educational materials, and content providers are continually being researched and added.

Our goal is to build a growing directory of trusted resources that ministries can use to strengthen their outreach efforts and expand access to biblical materials.

Working Together

No single ministry can accomplish the Great Commission alone.

By sharing knowledge, technology, content, training, and ministry resources, churches and organizations can work together more effectively to reach communities with the Gospel.

As this project continues to grow, additional ministry partners and resource providers will be added to help support churches, missionaries, and Christian workers around the world.
