

PROGRAMS & SERVICES

Equipping Ministries Through Technology

Our purpose is to help churches, missionaries, pastors, ministry leaders, and Christian organizations effectively use available technology to expand their outreach, strengthen discipleship, and increase access to God's Word.

This website serves as a practical resource center and blueprint for ministry. Rather than simply discussing possibilities, we focus on identifying proven tools, technologies, systems, and methods that can be applied in real-world ministry environments.

We seek to gather, organize, evaluate, and share information that enables Christian workers to accomplish their mission more effectively, especially in areas where traditional resources may be limited or unavailable.

What We Provide

Technology Research and Evaluation

Information on available technologies, equipment, software, communications systems, and digital tools that can be used to support ministry outreach and biblical education.

Satellite and Communications Solutions

Guidance on satellite communications, broadcast reception systems, digital content distribution, and methods of delivering Christian resources into remote or underserved areas.

Village-Based Information Systems

Resources and practical guidance related to portable and locally accessible digital libraries, educational systems, Scripture resources, and offline content delivery platforms.

Digital Bible and Resource Distribution

Methods for providing Bibles, biblical teaching materials, discipleship resources, children's content, leadership training materials, and Christian educational resources through both online and offline technologies.

Missionary and Church Support Resources

Practical information that can assist pastors, missionaries, church leaders, and ministry workers in identifying solutions that fit their unique field situations and ministry objectives.

Technology Training and Implementation

Step-by-step guidance designed to help ministries understand, deploy, operate, and maintain technology solutions effectively and sustainably.

Best Practices and Field-Tested Solutions

Examples, case studies, lessons learned, and recommendations gathered from real-world ministry experiences and outreach efforts.

Our Goal

Our goal is to create a growing knowledge base that enables ministries to learn from one another, avoid unnecessary obstacles, and accelerate the spread of the Gospel through wise and effective use of technology.

We believe that knowledge becomes most valuable when it is shared. By providing practical information, training resources, and proven strategies, we hope to help Christian workers around the world fulfill their calling more effectively.

This website exists to serve as a resource, a guide, and a blueprint for those seeking to use modern technology in support of the Great Commission.

Connecting Knowledge, Technology, and Ministry for the Advancement of the Gospel.
