

Kit Levels and Costs

Kit levels help a board or field team understand what tools are needed, what can wait, and what should be quoted before purchase.

VillageServer Initiative printable field guide. Save this PDF on a phone, laptop, USB drive, or microSD card before travel.

Plain answer

Start with the smallest kit that solves the field problem. Add power, projector, or satellite only when the mission setting actually calls for it.

Field steps

1. Define the use case - Ask whether the need is personal phone sharing, group teaching, local library access, remote updates, or all of those.
2. Pick the base level - Start with phone-sharing materials or a Raspberry Pi local library kit.
3. Add power only if needed - Choose battery or solar based on runtime and grid reliability.
4. Add media for groups - Use projector and audio when one resource must serve a room or gathering.
5. Quote satellite separately - Treat satellite as an optional add-on because hardware, subscription, and power needs vary.
6. Record item prices - Keep chips, Raspberry Pi, projector, solar, and satellite kit costs itemized.

Key points

Basic Kit: Phone sharing guides, microSD/USB options, and printed instructions.

Local Library Kit: Raspberry Pi server, storage, power, and simple access instructions.

Media/Power Kit: Projector, speaker, battery, and solar support for group use.

Satellite-Enabled Kit: Optional uplink for remote updates and coordination.
