

Programs and Services

VillageServer services are organized around access paths: phones, local Wi-Fi libraries, power, projector teaching, satellite updates, and training materials.

VillageServer Initiative printable field guide. Save this PDF on a phone, laptop, USB drive, or microSD card before travel.

Plain answer

The program is not one product. It is a set of practical access paths that can be combined based on the field need.

Field steps

1. Assess the setting - Document language, device types, power, internet, and whether use is individual or group-based.
2. Pick the access path - Choose phone transfer, microSD, USB, Raspberry Pi library, projector, power, or satellite.
3. Prepare the kit - Load content, label cables, charge batteries, and pack the matching printed guides.
4. Train the local user - Teach the person who will repeat the setup after the visiting team leaves.
5. Support and update - Use feedback and partner reports to improve content, equipment, and training.

Key points

Phone distribution: Move resources from one device to another without mobile data.

VillageServer kit: Create a local Wi-Fi library with a Raspberry Pi.

Power and media: Support teaching with solar, batteries, projectors, and audio.

Resource partners: Coordinate content and ministry support with trusted affiliates.

Field habit: do one small test first. Open one file, confirm it works offline, then teach the next person to repeat it.
