

Raspberry Pi VillageServer System

A library that fits in your hand: language microSD cards, USB readers, local Wi-Fi, and a simple browser page.

VILLAGESERVER CASE WITH USB READERS

Plain answer

The VillageServer is a small offline library. The microSD cards decide which languages and files are available; the Raspberry Pi makes those files appear on a local website that nearby phones can open without mobile data.

Field steps

01

Load the language cards

Place the needed microSD cards into USB readers or adapters. Each card can carry a language library.

02

Plug in the readers

Use the available USB ports on the Raspberry Pi to connect the microSD readers.

03

Power the server

Turn on the Raspberry Pi and wait for it to broadcast the VillageServer Wi-Fi network.

04

Join the Wi-Fi

On the phone, choose the VillageServer network and enter the one-time password: village123.

05

Open the library

Open a browser and type 10.43.0.1 to reach the local library pages.

06

View or download

Read, listen, watch, or download text, audio, video, and PDF files for offline use and sharing.

SIMPLE FIELD PROMISE

The person using the kit should not need to understand servers. They join Wi-Fi, type the local address, open a resource, and save what helps.

A library that fits in your hand

Each microSD card can carry a language-specific set of Scripture, audio, video, and PDFs. The Raspberry Pi reads those cards through USB adapters and broadcasts the library over local Wi-Fi for nearby phones.

VILLAGESERVER CASE WITH USB READERS

01

Language library

The hosted language depends on the microSD card inserted into the USB reader.

02

Wi-Fi access

Nearby phones join with password village123.

03

Local address

The library opens at 10.43.0.1, not on public internet.

04

Board takeaway

For the user, it feels like joining Wi-Fi and opening a simple website.

REMEMBER

Keep this handout with the field kit. Use it to explain the system in simple language before opening the longer website directory.
