

Android to iPhone

LocalSend

No cloud upload required

USE THIS WHEN

An Android needs to pass resources to an iPhone without using email, messaging, or cloud storage.

Follow these steps

01**Install LocalSend**

Install LocalSend on both phones while app-store access is available.

02**Join one network**

Connect both phones to the same local Wi-Fi or one phone's hotspot.

03**Select on Android**

Open LocalSend on Android, tap Send, choose the files, and select the resource.

04**Choose iPhone**

Tap the iPhone shown in LocalSend. Accept the request on the iPhone.

05**Save and verify**

Save to Files on the iPhone. Open the file once with airplane mode turned on.

SUCCESS CHECK

- LocalSend reports a completed transfer.
- The resource appears in the iPhone Files app and opens offline.

FIELD NOTE

If the phones cannot see each other, confirm both are on the same network and LocalSend has local-network permission on iPhone.
