

microSD to phone

Card reader

No cloud upload required

USE THIS WHEN

The field library is on a microSD card and needs to be copied safely to a phone.

Follow these steps

01**Protect the original**

If the adapter has a lock switch, lock it. Never delete or rename files on the master card.

02**Connect a reader**

Insert the card into a compatible USB-C or Lightning card reader, then connect it to the phone.

03**Open the card**

On Android use Files or My Files. On iPhone use Files, Browse, then the card under Locations.

04**Copy, do not move**

Copy the chosen language folder into Downloads, Documents, or On My iPhone.

05**Eject and test**

Wait for the copy to finish, eject the reader, and open one resource in airplane mode.

SUCCESS CHECK

- The original folder still remains on the microSD card.
- The copied file opens after the reader is removed.

FIELD NOTE

Carry one reader for USB-C and the correct adapter for older Lightning iPhones. Label every master card by language.
