

iPhone to Android

LocalSend

No cloud upload required

USE THIS WHEN

An iPhone needs to pass resources to an Android without sending them through the cloud.

Follow these steps

01**Install LocalSend**

Install LocalSend on both phones before leaving reliable internet access.

02**Join one network**

Connect both phones to the same local Wi-Fi or to one phone's hotspot.

03**Select on iPhone**

Open LocalSend on the iPhone, tap Send, choose Files, and select the resource.

04**Choose Android**

Tap the Android device shown in LocalSend. Accept the request on Android.

05**Verify the copy**

Open the saved file on Android and test it with airplane mode turned on.

SUCCESS CHECK

- Both devices showed each other inside LocalSend.
- Android can open the received file offline.

FIELD NOTE

LocalSend works locally across Android, iOS, Windows, macOS, and Linux. It does not require an account.
